

(a)

Problem: Area of right triangle with legs 3, 4

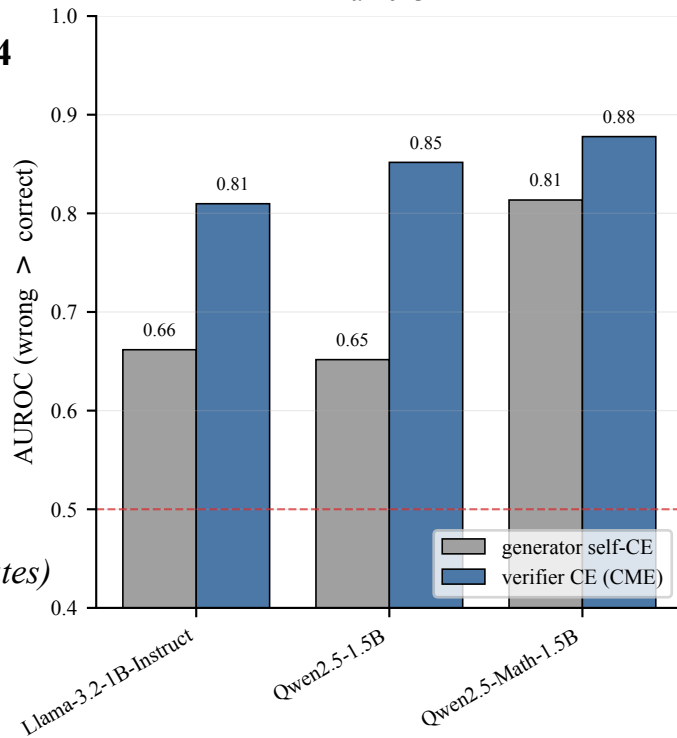

A) $A = \frac{1}{2} \cdot 3 \cdot 4 = 6$ — $\begin{cases} \xrightarrow{\text{generator}} \text{CE} = 2.1 \\ \xrightarrow{\text{verifier}} \text{CE} = 0.4 \end{cases}$

B) $A = 3 \cdot 4 = 12$ — $\begin{cases} \xrightarrow{\text{generator}} \text{CE} = 2.3 \\ \xrightarrow{\text{verifier}} \text{CE} = 5.2 \end{cases}$

$$\Delta CE_{\text{gen}} = 0.2 \text{ (ambiguous)} \mid \Delta CE_{\text{ver}} = 4.8 \text{ (separates)}$$
